

## SQL Cheat Sheet - Oracle

### SELECT

```
SELECT col1, col2
FROM table
WHERE condition
GROUP BY cols
HAVING condition
ORDER BY col;
```

### Order of Processing

1. FROM
2. JOIN
3. WHERE
4. GROUP BY
5. HAVING
6. SELECT
7. DISTINCT
8. ORDER BY
9. FETCH

### SELECT Keywords

**DISTINCT:** Removes duplicate results

**BETWEEN:** Matches a value between two other values (inclusive)

**IN:** Matches a value to one of many values

**LIKE:** Performs partial/wildcard matches

### Modifying Data

#### INSERT:

```
INSERT INTO tablename (col1, col2...)
VALUES (val1, val2);
```

#### INSERT From Table:

```
INSERT INTO tablename (col1, col2...)
SELECT col1, col2...
```

#### UPDATE:

```
UPDATE tablename SET col1 = val1
WHERE condition;
```

#### DELETE:

```
DELETE FROM tablename WHERE condition;
```

#### TRUNCATE:

```
TRUNCATE TABLE tablename;
```

#### UPDATE with Join:

```
UPDATE t
SET col1 = val1
FROM tablename t
INNER JOIN table x ON t.id = x.tid
WHERE condition;
```

#### INSERT Multiple Rows:

```
INSERT
INTO tablename (col1, col2) VALUES
(valA1, valB1)
INTO tablename (col1, col2) VALUES
(valA2, valB2)
SELECT * FROM dual;
```

#### MERGE:

```
MERGE INTO table_name
USING table_name
ON (condition)
WHEN MATCHED THEN update_clause
DELETE where_clause
WHEN NOT MATCHED THEN insert_clause;
```

### Joins

```
SELECT t1.*, t2.*
FROM t1
join_type t2 ON t1.col = t2.col;
```

**INNER JOIN:** show all matching records in both tables.

**LEFT JOIN:** show all records from left table, and any matching records from right table.

**RIGHT JOIN:** show all records from right table, and any matching records from left table.

**FULL JOIN:** show all records from both tables, whether there is a match or not.

**CROSS JOIN:** show all combinations of records from both tables.

**SELF JOIN:** join a table to itself. Used for hierarchical data.

```
SELECT p.*, c.*
FROM yourtable p
INNER JOIN yourtable c ON p.id =
c.parent_id;
```

# SQL Cheat Sheet - Oracle

## Create Table

### Create Table:

```
CREATE TABLE tablename (
    column_name data_type
);
```

### Create Table With Constraints:

```
CREATE TABLE tablename (
    column_name data_type NOT NULL,
    CONSTRAINT pkname PRIMARY KEY (col),
    CONSTRAINT fkname FOREIGN KEY (col)
REFERENCES
other_table(col_in_other_table),
    CONSTRAINT ucname UNIQUE (col),
    CONSTRAINT ckname CHECK (conditions)
);
```

### Drop Table:

```
DROP TABLE tablename;
```

### Create Temporary Table:

```
CREATE GLOBAL TEMPORARY TABLE tname (
    colname data_type
) ON COMMIT DELETE ROWS;
```

## Alter Table

### Add Column

```
ALTER TABLE tablename ADD columnname
datatype;
```

### Drop Column

```
ALTER TABLE tablename DROP COLUMN
columnname;
```

### Modify Column

```
ALTER TABLE tablename MODIFY columnname
newdatatype;
```

### Rename Column

```
ALTER TABLE tablename RENAME COLUMN
currentname TO newname;
```

### Add Constraint

```
ALTER TABLE tablename ADD CONSTRAINT
constraintname constrainttype (columns);
```

### Drop Constraint

```
ALTER TABLE tablename DROP CONSTRAINT
constraintname;
```

```
ALTER TABLE tablename DROP
constraint_type constraintname;
```

### Rename Table

```
ALTER TABLE tablename RENAME TO
newtablename;
```

## Indexes

### Create Index:

```
CREATE INDEX indexname ON tablename
(cols);
```

### Drop Index:

```
DROP INDEX indexname;
```

## Set Operators

UNION: Shows unique rows from two result sets.

UNION ALL: Shows all rows from two result sets.

INTERSECT: Shows rows that exist in both result sets.

MINUS: Shows rows that exist in the first result set but not the second.

## Analytic Functions

```
function_name ( arguments ) OVER (
    [query_partition_clause]
    [ORDER BY order_by_clause
    [windowing_clause] ] )
```

Example using RANK, showing the student details and their rank according to the fees\_paid, grouped by gender:

```
SELECT
student_id, first_name, last_name,
gender, fees_paid,
RANK() OVER (PARTITION BY gender ORDER
BY fees_paid) AS rank_val
FROM student;
```

## CASE Statement

### Simple Case:

```
CASE name
    WHEN 'John' THEN 'Name John'
    WHEN 'Steve' THEN 'Name Steve'
    ELSE 'Unknown'
END
```

### Searched Case:

## SQL Cheat Sheet - Oracle

```
CASE
  WHEN name='John' THEN 'Name John'
  WHEN name='Steve' THEN 'Name Steve'
  ELSE 'Unknown'
END
```

### With Clause/Common Table Expression

```
WITH queryname AS (
  SELECT col1, col2
  FROM firsttable)
SELECT col1, col2..
FROM queryname...;
```

### Subqueries

#### Single Row:

```
SELECT id, last_name, salary
FROM employee
WHERE salary = (
  SELECT MAX(salary)
  FROM employee
);
```

#### Multi Row

```
SELECT id, last_name, salary
FROM employee
WHERE salary IN (
  SELECT salary
  FROM employee
  WHERE last_name LIKE 'C%'
);
```

### Aggregate Functions

SUM: Finds a total of the numbers provided

COUNT: Finds the number of records

AVG: Finds the average of the numbers provided

MIN: Finds the lowest of the numbers provided

MAX: Finds the highest of the numbers provided

### Common Functions

LENGTH(string): Returns the length of the provided string

INSTR(string, substring, [start\_position], [occurrence]): Returns the position of the substring within the specified string.

TO\_CHAR(input\_value, [fmt\_mask], [nls\_param]): Converts a date or a number to a string

TO\_DATE(charvalue, [fmt\_mask], [nls\_date\_lang]): Converts a string to a date value.

TO\_NUMBER(input\_value, [fmt\_mask], [nls\_param]): Converts a string value to a number.

ADD\_MONTHS(input\_date, num\_months): Adds a number of months to a specified date.

SYSDATE: Returns the current date, including time.

CEIL(input\_val): Returns the smallest integer greater than the provided number.

FLOOR(input\_val): Returns the largest integer less than the provided number.

ROUND(input\_val, round\_to): Rounds a number to a specified number of decimal places.

TRUNC(input\_value, dec\_or\_fmt): Truncates a number or date to a number of decimals or format.

REPLACE(whole\_string, string\_to\_replace, [replacement\_string]): Replaces one string inside the whole string with another string.

SUBSTR(string, start\_position, [length]): Returns part of a value, based on a position and length.

### Common Format Masks

YYYY: 4 digit year

YY: 2 digit year

MM: Month (01 to 12)

MON: Abbreviated month name

D: Day of week (1 to 7)

DAY: Name of day

DD: Day of month (01 to 31)

DY: Abbreviated day name

HH: Hour of day (01 to 12)

MI: Minute of hour (00 to 59)

SS: Second of minute (00 to 59)
